

PART 1 - SECTION A (MCQ) — 36 QUESTIONS

Topic : Atoms, Electromagnetic waves, Wave optics, System of particles and rotational motion, Electromagnetic induction, Ray optics and optical instruments, Motion in a plane, Thermodynamics (physics), Waves, Thermodynamics, Chemical bonding and molecular structure, Structure of atom, p-Block elements (group 15–18), Chemical kinetics, Aldehydes, ketones and carboxylic acids, Application of derivatives, Conic sections, Matrices, Inverse trigonometric functions, Probability (class 12), Three dimensional geometry, Continuity and differentiability, Complex numbers and quadratic equations, Trigonometric functions, Vector algebra

SECTION-A : (Maximum Marks : 144)

- This section contains **36** questions.
- Each question has **FOUR** options (A), (B), (C) and (D). **ONE OR MORE THAN ONE** of these four option(s) is(are) correct answer(s).
- For each question, choose the option(s) corresponding to (all) the correct answer(s).
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks	: +4	ONLY if (all) the correct option(s) is(are) chosen;
Partial Marks	: +3	If all the four options are correct but ONLY three options are chosen;
Partial Marks	: +2	If three or more options are correct but ONLY two options are chosen, both of which are correct;
Partial Marks	: +1	If two or more options are correct but ONLY one option is chosen and it is a correct option;
Zero Marks	: 0	If none of the options is chosen (i.e. the question is unanswered);
Negative Marks	: -1	In all other cases.
- For example, in a question, if **(A), (B) and (D)** are the ONLY three options corresponding to correct answers, then choosing ONLY (A), (B) and (D) will get +4 marks; choosing ONLY (A) and (B) will get +2 marks; choosing ONLY (A) and (D) will get +2 marks; choosing ONLY (B) and (D) will get +2 marks; choosing ONLY (A) will get +1 mark; choosing ONLY (B) will get +1 mark; choosing ONLY (D) will get +1 mark; choosing no option (i.e. the question is unanswered) will get 0 marks; and choosing any other combination of options will get -1 marks.

1. Consider a hydrogen atom with v_k , r_k , and K_k denoting the velocity, orbital radius and kinetic energy of the electron in the k^{th} orbit, respectively. The electron undergoes a transition from the n^{th} orbit, emitting radiation corresponding to the Lyman series. Considering h to be the Planck's constant and ϵ_0 the permittivity of the free space, the correct statement(s) is/are: [JEE Advanced 2026 Paper 1]

(A) Magnitude of change in kinetic energy of electron can be expressed as $\frac{h}{4\pi} \left| \frac{nv_n}{r_n} - \frac{v_1}{r_1} \right|$.

(B) Magnitude of change in de Broglie wavelength of the electron can be expressed as $\frac{e^2}{4\epsilon_0} \left| \frac{1}{K_n} - \frac{1}{K_1} \right|$.

(C) Frequency of the radiation emitted can be expressed as $\frac{e^2}{8\pi\epsilon_0 h} \left(\frac{1}{r_1} - \frac{1}{r_n} \right)$.

(D) Magnitude of change in total energy of the electron can be expressed as $\frac{h}{2\pi} \left| \frac{v_1}{r_1} - \frac{nv_n}{r_n} \right|$.

2. The electric field associated with an electromagnetic wave travelling in vacuum is given by $E_0 \sin(3y + 4z + \omega t) \hat{i}$, where ω is the angular frequency. All quantities are in SI units. The correct statement(s) about this wave is/are:

[Given: speed of light in vacuum $c = 3 \times 10^8 \text{ ms}^{-1}$.]

[JEE Advanced 2026 Paper 1]

- (A) The wave is travelling in $-\frac{1}{5}(3\hat{j} + 4\hat{k})$ direction.
 (B) The magnitude of the wave vector is 0.5 m^{-1} .
 (C) The value of ω is $1.5 \times 10^9 \text{ rad s}^{-1}$.
 (D) The magnetic field associated with this wave is given by $\frac{E_0}{c} \sin(3y + 4z + \omega t)(4\hat{j} - 3\hat{k})$.

4. Consider a large disk of radius R and two smaller disks, each of radius $r = R/50$, lying on its circumference, as shown in the figure. The smaller disks are initially in contact with each other, with an angular separation $\Delta\theta$ between their centers. They are made to roll without slipping in opposite directions, with constant angular velocities ω and 2ω while the large disk is held stationary. The time τ at which the smaller disks are again in contact is:

[Use $\sin(\Delta\theta) = \Delta\theta$ and ignore gravity.]

8. A particle is thrown with a speed v from a point O at an angle θ with the horizontal plane such that it passes through the point P at a height of 1 m and horizontal distance of 5 m from O, as shown in the figure. If acceleration due to gravity is $g \text{ ms}^{-2}$, then the correct statement(s) is/are:

[JEE Advanced 2026 Paper 1]

- (A) If $\theta = 45^\circ$, then $v = \frac{5\sqrt{g}}{2} \text{ ms}^{-1}$.
 (B) If $\theta = 45^\circ$, the particle reaches its maximum height before it reaches P.
 (C) If $\theta = 30^\circ$, the particle reaches its maximum height after reaching P.
 (D) If $\theta = \tan^{-1}\left(\frac{1}{5}\right)$, then $v = 125\sqrt{g} \text{ ms}^{-1}$.

9. A quasi-static cycle of a monoatomic ideal gas contains an isothermal process (ab), followed by an isochoric process (bc) and an adiabatic process (ca) as shown in the figure. The volumes of the gas are V_1 and V_2 at a and b, respectively. If the cycle has heat input Q_{in} and output Q_{out} , then the efficiency of the cycle is defined as $\eta = \frac{Q_{in} - Q_{out}}{Q_{in}}$. The correct statement(s) is/are:

[Given: $\ln 2 \approx 0.7$]

[JEE Advanced 2026 Paper 1]

- (A) If $V_2/V_1 = 8$, the heat released in the process bc is smaller than the heat absorbed in the process ab.
 (B) For a given value of V_2/V_1 , η does not depend on the temperature of the isothermal process.
 (C) If $V_2/V_1 = 8$, then the temperature of the gas at a is 4 times the temperature of the gas at c.
 (D) If $V_2/V_1 = 8$, then the pressure of the gas at a is 4 times the pressure of the gas at b.

32. Consider the matrix

$$M = \begin{bmatrix} 2 & -1 \\ 1 & 0 \end{bmatrix}.$$

Let p, q, r, s, a, b, c and d be integers such that

$$M^{26} = \begin{bmatrix} p & q \\ r & s \end{bmatrix} \text{ and } \sum_{k=1}^{26} M^k = \begin{bmatrix} a & b \\ c & d \end{bmatrix}.$$

Then which of the following statements is (are) TRUE ?

[JEE Advanced 2026 Paper 1]

(A) There exists a 2×2 invertible matrix N with real entries such that

$$MN = N \begin{bmatrix} 1 & 1 \\ 0 & 1 \end{bmatrix}$$

(B) The value of a is 378

(C) For any two given integers m and n , there exist unique integers x and y such that $px + qy = m$ and $rx + sy = n$

(D) For each positive real number t , the system of linear equations

$$(a + t)x + by = 1$$

$$cx + (d + t)y = -1$$

has a unique solution

PART 2 - SECTION B (NUMERICAL) — 12 QUESTIONS

Topic : Oscillations, Thermodynamics (physics), Thermal properties of matter, Moving charges and magnetism, States of matter, Coordination compounds, Hydrocarbons, Aldehydes, ketones and carboxylic acids, Relations and functions (class 12), Continuity and differentiability, Permutations and combinations, Trigonometric functions

SECTION-B : (Maximum Marks : 48)

- This section contains **TWELVE** questions.
- The answer to each question is a **NUMERICAL VALUE**.
- For each question, enter the correct numerical value of the answer (in decimal notation, truncated / rounded-off to the **SECOND DECIMAL PLACE**; e.g. 6.25, 7.00, -0.33, -0.30, 30.27, -127.30) in the place designated to enter the answer.
- Answer to each question will be evaluated according to the following marking scheme :

Full Marks : +4 If **ONLY** the correct answer is entered;

Zero Marks : 0 In all other cases.

37. A tank contains two immiscible liquids of densities 6ρ and 2ρ . The higher density liquid is filled up to a height $L/2$ from the bottom. A thin rod of density ρ and length L is fully immersed and hinged at the bottom so that it can oscillate freely, as shown in the figure. If the rod is slightly disturbed from its equilibrium, the time period of small oscillations is $\frac{2\pi}{n} \sqrt{\frac{L}{g}}$, where g is the acceleration due to the gravity. The value of n is:

Scan or tap for the full solution

38. As shown in the figure, five Carnot engines, each with efficiency η and same number of cycles per unit time, are operating between six heat reservoirs. The amount of heat released per cycle by one engine is completely absorbed by the next engine. Consider Q_0 to be the amount of heat absorbed per cycle by the first engine and W as the amount of total work done by all the engines per cycle, then the net efficiency of the system is found to be $\eta_{\text{net}} = \frac{W}{Q_0} = \frac{211}{243}$. The value of η is:

39. As shown in the figure, an insulated container is fitted with a thermally conducting but immovable partition (P_1) and a freely movable but thermally insulated piston (P_2). The partition P_1 with thermal conductivity K , cross sectional area A and width x divides the container into two sections, S_1 and S_2 , each containing one mole of a monoatomic gas. The piston P_2 moves freely such that the gas in S_2 is always at the atmospheric pressure. Initially, the difference between the temperatures of S_1 and S_2 is ΔT_0 . The time it takes for the temperature difference to become $\frac{\Delta T_0}{2}$ is $\frac{nxR}{KA}$, where R is the universal gas constant.

The value of n is:

[Given: $\ln 2 \approx 0.7$]

41. Two cylinders, both fitted with frictionless pistons, are filled with mixtures of He and Ar gases. In the first cylinder, the masses of He and Ar are m_1 and m_2 , respectively. In the second cylinder, the masses of He and Ar are m_2 and m_1 , respectively. The molar mass of Ar is 10 times the molar mass of He. The external pressure applied by the piston on the first cylinder needs to be 5 times that on the second cylinder so that the volume of the gas mixtures in both the cylinders are equal at the same temperature. Assuming He and Ar behave like ideal gases, the value of (m_1/m_2) is _____. [JEE Advanced 2026 Paper 1]
