

JEE MAIN MECHANICAL PROPERTIES OF SOLIDS — SHEAR MODULUS (MODULUS OF RIGIDITY) — PYQS

Max. Marks: 12
Questions: 3

Section A (MCQ) — 1 question

- Q.1** A cylindrical rod of length 1 m and radius 4 cm is mounted vertically. It is subjected to a shear force of 10^5 N at the top. Considering infinitesimally small displacement in the upper edge, the angular displacement θ of the rod axis from its original position would be : (shear modulus, $G = 10^{10}$ N/m²)

[JEE Main 2025 (Online) 4th April Evening Shift]

- (1) $1/160\pi$ (2) $1/2\pi$ (3) $1/4\pi$ (4) $1/40\pi$

full solution

Section B (Numerical) — 2 questions

- Q.2** A cube has side length 5 cm and modulus of rigidity 10^5 N/m². The displacement produced by a force of 10 N in the upper face of cube is _____ mm.

- Q.3** Two slabs with square cross section of different materials (1, 2) with equal sides (l) and thickness d_1 and d_2 such that $d_2 = 2d_1$ and $l > d_2$. Considering lower edges of these slabs are fixed to the floor, we apply equal shearing force on the narrow faces. The angle of deformation is $\theta_2 = 2\theta_1$. If the shear modulus of material 1 is 4×10^9 N/m², then shear modulus of material 2 is $x \times 10^9$ N/m², where value of x is _____.
