

NEET BIOMOLECULES — PROTEINS — PYQS

Max. Marks: 44

Questions: 11

Section A (MCQ) — 11 questions

Q.1 The correct statement about peptides and proteins is

[RE-NEET (UG) 2026]

- (1) In α -helices, the polypeptide chain is twisted into a left-handed screw (helix) through intramolecular hydrogen bonds
- (2) Tertiary structure of proteins has two or more polypeptide subunits
- (3) Only the proteins having a quaternary structure are biologically active
- (4) In β -pleated sheet structures, peptide chains are held together by intermolecular hydrogen bonds

**Q.2** The incorrect statement about denaturation of proteins is :

[NEET (UG) 2022 (Phase 2)]

- (1) Uncoiling of the helical structure takes place
- (2) It results due to change of temperature and/or pH
- (3) It results in loss of biological activity of proteins
- (4) A protein is formed from amino acids linked by peptide bonds

**Q.3** Which of the following statements is not correct?

[NEET 2017]

- (1) Ovalbumin is a simple food reserve in egg-white.
- (2) Blood proteins thrombin and fibrinogen are involved in blood clotting.
- (3) Denaturation makes the proteins more active.
- (4) Insulin maintains sugar level in the blood of a human body.

**Q.4** In a protein molecule various amino acids are linked together by

[NEET 2016 (Phase 1)]

- (1) peptide bond
- (2) dative bond
- (3) α -glycosidic bond
- (4) β -glycosidic bond.

**Q.5** Which of the statements about "Denaturation" given below are correct?

- A. Denaturation of proteins causes loss of secondary and tertiary structures of the protein.
- B. Denaturation leads to the conversion of double strand of DNA into single strand.
- C. Denaturation affects primary structure which gets distorted.

[AIPMT 2011 (Mains)]

- (1) B and C
- (2) A and C
- (3) A and B
- (4) A, B and C

**Q.6** Which functional group participates in disulphide bond formation in proteins?

[AIPMT 2005]

- (1) Thioester
- (2) Thioether
- (3) Thiol
- (4) Thiolactone

**Q.7** The cell membranes are mainly composed of

[AIPMT 2005]

- (1) fats
- (2) proteins
- (3) phospholipids
- (4) carbohydrates

**Q.8** The correct statement in respect of protein haemoglobin is that it

[AIPMT 2004]

- (1) functions as a catalyst for biological reactions
- (2) maintains blood sugar level
- (3) acts as an oxygen carrier in the blood
- (4) forms antibodies and offers resistance to diseases.

**Q.9** The helical structure of protein is stabilised by

[AIPMT 2004]

- (1) dipeptide bonds
- (2) hydrogen bonds
- (3) ether bonds
- (4) peptide bonds

**Q.10** Which of the following structures represents the peptide chain?

[AIPMT 2004]

Q.11

Which statement is incorrect about peptide bond?

[AIPMT 2001]

- (1) C–N bond length in proteins is longer than usual bond length of N–C bond.
- (2) Spectroscopic analysis shows planar structure of $\begin{array}{c} \text{O} \\ || \\ -\text{C}-\text{NH}- \end{array}$ group.
- (3) C–N bond length in proteins is smaller than usual bond length of C–N bond.
- (4) None of the above.
