

NEET D- AND F-BLOCK ELEMENTS — GENERAL CHARACTERISTICS OF ACTINOIDS AND COMPARISON WITH LANTHANOIDS — PYQS

Max. Marks: 8

Questions: 2

Section A (MCQ) — 2 questions

Q.1 The incorrect statement among the following is :

[NEET (UG) 2021]

- (1) Actinoids are highly reactive metals, especially when finely divided.
- (2) Actinoid contraction is greater for element to element than lanthanoid contraction.
- (3) Most of the trivalent Lanthanoid ions are colorless in the solid state.
- (4) Lanthanoids are good conductors of heat and electricity.

Q.2 More number of oxidation states are exhibited by the actinoids than by the lanthanoids. The main reason for this is

[AIPMT 2006]

- (1) more active nature of the actinoids
- (2) more energy difference between 5f and 6d orbitals than that between 4f and 5d orbitals
- (3) lesser energy difference between 5f and 6d orbitals than that between 4f and 5d orbitals
- (4) greater metallic character of the lanthanoids than that of the corresponding actinoids.
